

BELT CONVEYORS

Meet high sanitation requirements

Belt Conveyors are engineered for the high sanitary demands and specific product requirement of food, chemical and pharmaceutical processors. They're as tough as they come, with slider beds designed to withstand up to 250 lbs. at any point on the conveyor surface.

Easy to clean features include open, rod type slider beds and shaft mounted gear motors or motorized pulleys. We've also eliminated horizontal ledges so there's no place for dust and dirt to accumulate. You can specify sanitary type single or double pedestal mounting legs or ceiling hanger brackets.

Superior tracking helps to extend belt life. Flat top, cleated and trough style belts are available, as well as modular plastic belting.

Conveyor frame, slider bed and support legs (or ceiling hanger brackets) can be fabricated from your choice of stainless steel, aluminum or painted steel.

Sanitary, Easy To Clean Design

AVAILABLE OPTIONS INCLUDES

- Hinged or fixed covers
- Aspiration hoods
- Fines removal rotary brushes
- Elevating configuration
- Catch pans
- Belt scrapers
- Fines collection hoppers
