

You know who it is on the football field. But did you know the *Slipstick Conveyor* can be your sanitary "Wide Receiver" to accumulate product upstream of a packaging distribution system? In this recently installed system, the upper *Slipstick* pan has a diagonal slot to uniformly distribute the product across the wide *Slipstick* on the bottom. The width of the bottom *Slipstick* is 102" to keep product depth shallow and still achieve 30 minutes of surge time. The *Slipstick* provides gentle, sanitary on-line storage of even the most fragile products with no moving parts in the food zone, greatly reducing the risk of cross-contamination that commonly occurs when using a belt storage unit.

Call 1.800.527.2116 today or email sales@sssdynamics.com to add the *Slipstick* "Wide Receiver" to your processing lineup.

When food safety matters,
the **Slipstick Accumulator**
is the sanitary alternative.
