

TRIPLE/S DYNAMICS EQUIPMENT AUDIT

Proactively prevent component failures, major repairs and unplanned downtime.

Initial inspection puts you back on track. Your Triple/S Dynamics equipment was robustly engineered to run trouble free for years – there are hundreds of units that have been operating for ten, twenty or thirty years. But you must properly maintain it to reap the savings – and it is easy to fall behind. To keep maintenance on track, start with a top-to-bottom audit of your Triple/S Dynamics equipment. One of our skilled technicians will conduct the 4-8 hour inspection (depending upon the number of machines; typically our field techs average 5-6 machines per 8-hour

audit, depending upon complexity of your installation). You will get a detailed report with early warnings of part wear and/or impending component failures. We will also evaluate your maintenance program and provide a 30-minute consultation so you can learn how to make cost saving improvements.

Your audit includes:

- Maintenance baseline for your Triple/S Dynamics equipment;
- Detailed inspection report pinpointing maintenance/repair needs;
- One-on-one consultation on how to maximize equipment longevity.

To learn more ways to save or to schedule an audit, contact us today at 1-214-828-8677 or parts@sssdynamics.com
